INTRODUCTION

Antaira Technologies' ARS-7131-AC series is a single radio industrial 802.11a/b/g/n/ac wireless LAN access point with added router capabilities. Embedded with the Qualcomm/Atheros QCA9892 chipset, it boasts network robustness, stability, and a wide network coverage with a very low voltage input of 9V. Based on IEEE 802.11 a/b/g/n/ac, the access point supports high-speed data transmission of up to 867Mbps.

The ARS-7131-AC series is capable of operating in different modes, which makes it suitable for a wide variety of wireless applications including long-distance deployments. The unit also allows the user to position the wireless antennas in a better signal-broadcasting location for improved wireless coverage and signal strength or simply in a more convenient location.
